SECTION 3 - VISUALIZATION (QUESTION 1)

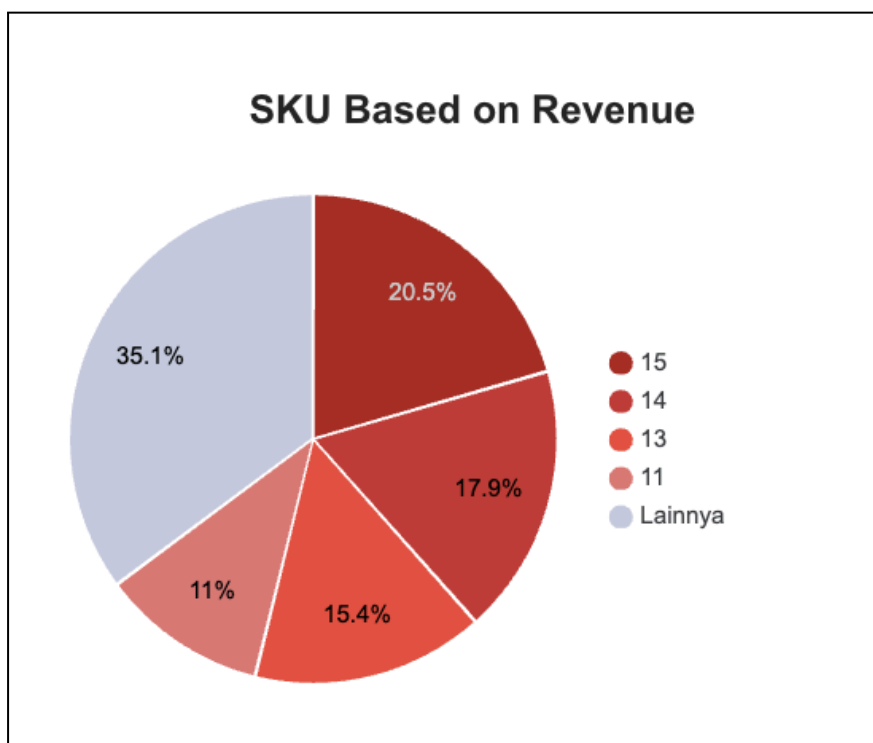

SECTION 3 - VISUALIZATION (QUESTION 2)

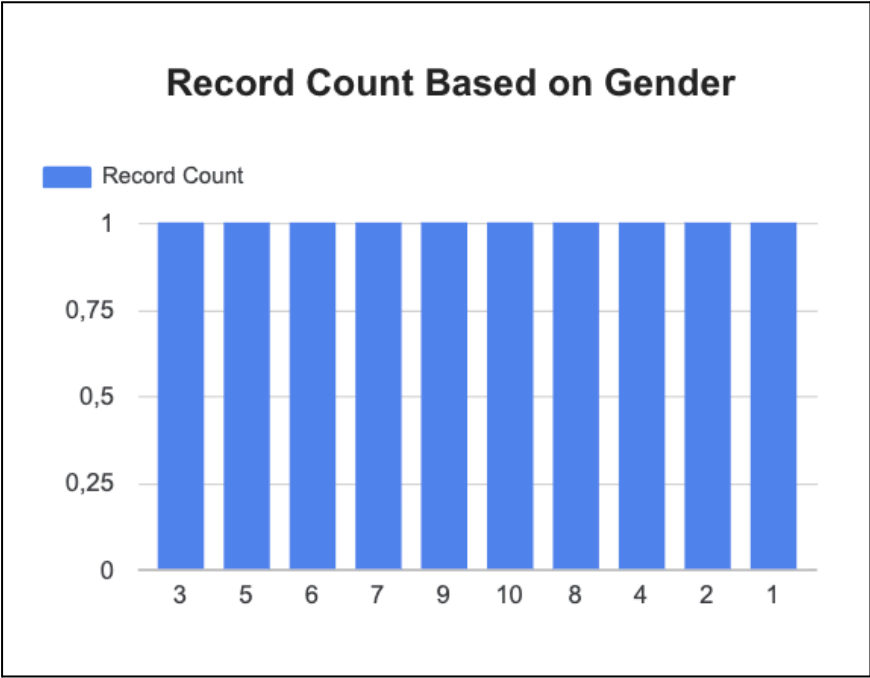

SECTION 3 - VISUALIZATION (QUESTION 3)

The main difference between the first and second visualizations is the level of category detail displayed. In the first chart, all SKUs are displayed in full, each with its own share (15, 14, 13, 11, 10, 9, 8, 7, 6, and Others), making the revenue breakdown more granular. Meanwhile, in the second chart, only the top five SKUs (15, 14, 13, 11) are displayed individually, while all other SKUs are combined into one large category, "Others," with a share of 35.1%. This makes the second visualization more concise, focusing on the SKUs with the largest contributions, and simplifying the data's readability

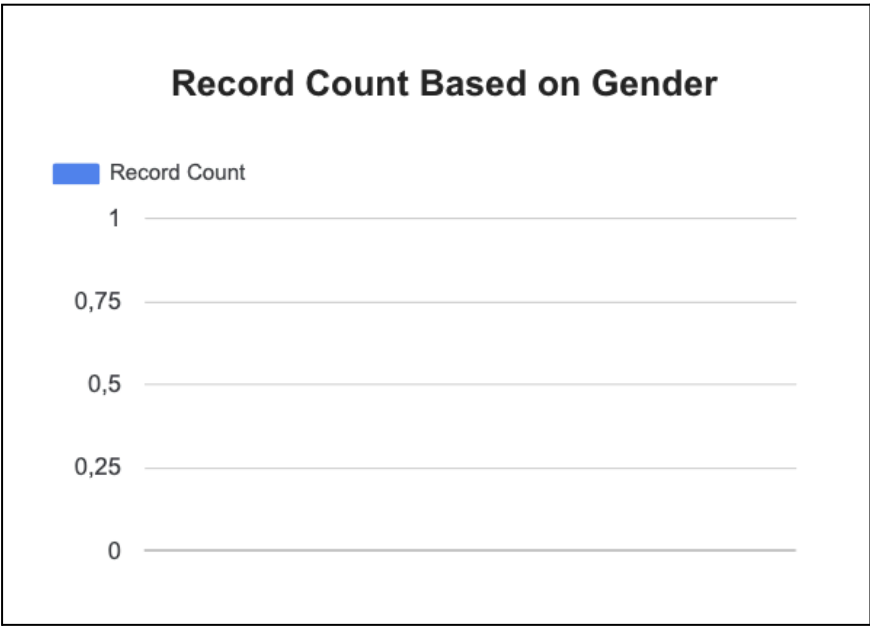

SECTION 3 - VISUALIZATION (QUESTION 4)

SECTION 4 - CLEAN DATA (QUESTION 1)

SECTION 4 - CLEAN DATA (QUESTION 2)

The difference is that in question 2 the diagram does not display the count data because it is looking for data where the gender is the same as tiger, and the tiger gender is not in the data.
